Project 4 - Parser II
CS 4481

This project, in which you will build the action and goto tables, is the second phase of implementing a bottom-up parser.

1. Make a backup copy of your Parser project.
2. Copy the two included files into *src/parser*.
3. Load the Parser project into IDE.
4. Write code in `Parser` class to pass the unit tests. *Parser.java* is the only file that you will submit.

Scoring

You will be graded on how many tests your code passes. The input files when grading will be similar to the test files you are using.
